

Instructions for Completing the Weaning Weight Worksheet

Complete weaning weight information on contemporary groups is a requirement of the Canadian Angus Performance Program. Weaning weight information is used to assess calf growth. The acceptable age range for weaning weights is 120–280 days of age; calves should be weighed when the majority of the group is as close to 205 days of age as possible.

Column A – Member ID – This is your CAA membership ID number

Column B – Observation Date – the date that weights were collected. Use this date format 20211231 – must be 4 digits for the year; 2 digits for month; and 2 digits for day. Must be numbers only; do not use symbols such as - /

Column C – Animal ID – this is the animal’s registration number or the complete tattoo. Calf tattoo must be recorded in the correct format (CAA 1234Y).

Column D – Management Group – Indicate if all animals were managed the same and had the same opportunity to develop weaning weight

Column E – this is the weaning weight of the animal in pounds. Enter only the weight as a number, no letters
